WHAT IS THE PRODUCT? Bye Acne is a hand beauty tool that harnesses the power of red and blue light therapy to treat acne, with long-term results. This pain-free device is scientifically proven to quickly and visibly treat acne and breakouts while speeding up healing.

WHAT DOES THE PRODUCT DO?

Blue Light Therapy: Low-level blue light wavelengths are clinically proven to destroy acne-causing bacteria. This non-invasive therapy can also prevent future breakouts by reducing sebum production.

Red Light Therapy: Penetrates deeper below your skin to help reduce the inflammation and redness associated with acne. It also brightens post-acne hyperpigmentation and rejuvenates the skin.

3-Minute Treatment: Utilizes a pre-programmed treatment session to target and effectively clear mild-to-moderate acne quickly and painlessly.

How to use it:

Step 1: Start with clean, dry skin. Place the device over a blemish or breakout area.

Step 2: Turn on the device. Hold it over your treatment area for 3 minutes—it will automatically switch off when your treatment is complete!

Step 3: Move the device to a new region and repeat until you've treated all desired areas.

HIT POINTS:

- Bye Acne is FDA-cleared, pain-free, and uses a combination of Red and Blue LED light therapy to treat mild to moderate acne.
- This device is portable, rechargeable, and easy to use no matter where you're going.
- It prevents breakouts in just 3 minutes!

WHY SHOULD THE AUDIENCE BUY IT? Class II medical device, FDA-cleared, dermatologically approved, and non-invasive. Solawave was awarded the #1 Skincare Tool by The Zoe Report in its first year of business. Andrew is an alumnus of USC, graduating with a major in Business Administration and a concentration in Entrepreneurship.
